of America, Inc - Biological Solutions

PX700®

For WASTE WATER • LAKES & PONDS
INDUSTRIAL • AGRICULTURAL

SOLIDS REDUCTION • GREASE REDUCTION • ODOR ELIMINATION

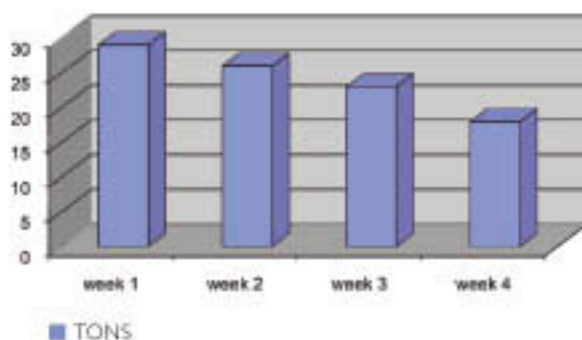

PX700® is a biocatalyst liquid that stimulates endogenous bacteria in a safe, fast and effective manner. PX700® provides an environmentally sound and personnel safe treatment for wastewater facilities. The cell growth regulators in PX700® dramatically increase the metabolic and reproductive rates of endogenous bacteria. By introducing PX700® into a wastewater facility, a more complete breakdown of organic solids and odors can be achieved without the use of laboratory cultured microorganisms or toxic chemicals.

BY INTRODUCING PX700® INTO YOUR FACILITY YOU WILL RECEIVE THE FOLLOWING BENEFITS:

- BIOSOLIDS REDUCTION
- DECREASED HAULING COSTS
- DECREASED USE OF POLYMERS/FLOCCULENT
- DECREASED ENVIRONMENTAL CONCERNS
- DECREASED ELECTRICAL COSTS
- DECREASE IN ODORS ASSOCIATED WITH PLANT OPERATIONS
- TOTAL SUSPENDED SOLIDS REDUCTION IN EFFLUENT
- DECREASED RECOVERY TIME AFTER UPSET
- DELAY OR ELIMINATE THE NEED FOR FUTURE CAPITAL INVESTMENT
- REDUCED LABOR COSTS
- IMPROVED PLANT PERFORMANCE

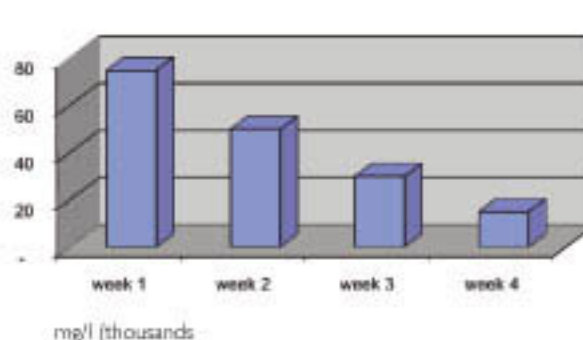

BIOSOLIDS REDUCTION

Bio-solids reduction via endogenous stimulation which directly relates to lower solids disposal costs.

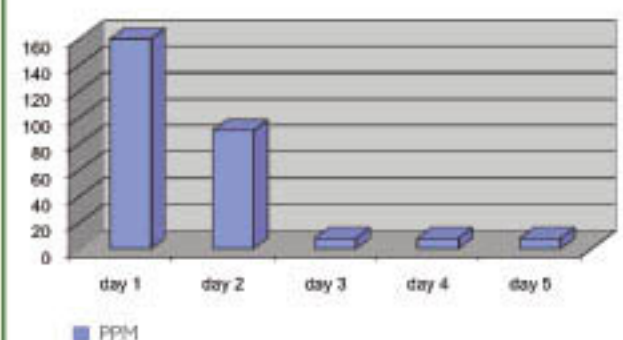

GREASE REDUCTION

Dramatically increases the metabolic and reproductive rates of the endogenous bacteria already present.

H₂S ODOR ELIMINATION

Reduced scum formation resulting in less odors.
